Introduction (30 minutes)

Using Poseidon for UML create Use Case Diagram describing operation of a software system for travel agency. The system should allow users to browse (using web browser) through a list of available trips, search for particular trip, select particular trip, read user comments about the trip. The user should be able to register - this should allow him/her to post comments about the trips and to make reservation of trips. Travel agency representative should be able to manage trips on the list. The list and information about reservations is stored in a database.

- introduce following actors: user, agency rep, trips database
- introduce following use cases (among others): select trip, browse, find,...
